

P-12 Risk Distribution in Public-Private Partnerships

Course Description

P-12 Risk Distribution in PPPs prepares students to navigate outcomes faced in risk distribution and the inherent effects it introduces for both the government and the private sector.

Through case studies and practical activities, participants will explore the distinctions between financing for and funding of PPP projects while considering risk allocation, the government's willingness to share risks, and the impacts on its financial interests.

In addition, this course will explore types of public-sector risk-sharing, appropriate mitigation strategies in the contract phase, and managing risk through the completion of the project.

Learning Outcomes

Through successful completion of this course, participants will be able to:

- Explain the consequences derived from the risk distribution principle in PPPs, including fiscal risk
- Distinguish between the funding and financing of a PPP project
- Evaluate a request or option for public support for sharing risk in a PPP project
- Assess government risk exposure in a PPP contract and potential effects if issues are not resolved
- Understand how to identify and resolve disputes that arise from risks within their PPP project.

Online Learning at its Best

IP3's two-week online courses allow participants to interact with top instructors and their own peers to develop a more in-depth understanding of the PPP landscape.

These courses "meet" online for live video webinar sessions that deliver students the opportunity to ask questions and receive speedy answers, much like our in-classroom courses. In between sessions, students have access to myriad resources, including video presentations, interactive discussion forums, and quizzes and knowledge checks.

Online Learning Includes

Four 2-Hour
Interactive
Webinars
